                                                    ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABPS-124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9

The SAR protein controls the pryression of potential virulence factors, such as bacterial endotoxins. The SAR locus is thought to regulate exoprotein genes positively, at the mRNA level. This protein can be used for designing analogues which

accessory regulatory procein (TI), designated sar) which regulates the expression of S. aureus exoprotein virulence determinants (EVD). (I) controls the expression of virulence determinants such as endotoxins in S. aureus. (I) is used to design analogs that interfere with expression of EVD, i.e. potential antibacterial agents and for generating specific antibodies which are used to detect (I) in microbial isolates or for affinity purification of (I). The nucleic acid (II) that encodes (I) or its fragments) can be used to identify S. aureus that express sar (and thus EVD) by usual hybridization and amplification tests, also for recombinant production of (I). This sequence represents the Staphylococcus aureus sarA protein which is described in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           w accessory regulatory protein, sar, from Staphylococcus aureus, used design analogs potentially useful as antibacterial agents -
                                                                                                                                                                                                                                         Staphylococcal accessory regulatory protein; sar protein; endotoxin; exoprotein virulence determinant; EVD; antibacterial agent; detection.

The present sequence is given in a specification relating to a method for identifying inhibitors of SarA (staphylococcal accessory regulator) function involved in the expression of Staphylococcal virulence genes. The method comprises contacting a candidate inhibitor with a SarA binding site of the agr (accessory gene regulator) locus in solution and assessing the binding of the candidate inhibitor to the SarA binding site of the agr locus. The identified inhibitors are useful for preventing and treating staphylococcal infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 MSKINDINDLVNATFQVKKFFRDTKKKFNLNYEEIYILNHILRSESNEISSKEIAKCSEF

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes a novel full-length Staphylococcus aureus accessory regulatory protein ([I], designated sar) which regulates the expression of S. aureus exoprotein virulence determinants (BVD). (I) controls the expression of virulence determinants such as endotoxins in S. aureus. (I) is used to design analogs that interfere with expression of EVD, i.e. potential antibacterial agents and for generating specific antibodies which are used to detect (I) in microbial isolates or for affinity purification of (I). The nucleic acid (II) that encodes (I) (or its fragments) can be used to identify S. aureus that express sar lend thus EVD) by usual hybridization and amplification tests, also for recombinant production of (I). This sequence represents a Staphylococcus aureus sarA protein which is described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .

This invention describes a novel full-length Staphylococcus aureus accessory regulatory protein ([1], designated sar) which regulates the expression of S. aureus exoprotein virulence determinants (EVD). (I) controls the expression of virulence determinants such as endotoxins in S. aureus. (I) is used to design analogs that interfere with expression of EVD, i.e. potential antibacterial agents and for generating specific antibodies which are used to detect (I) in microbial isolates or for affinity purification of (I). The nucleic acid (II) that encodes (I) or its fragments) can be used to identify S. aureus that express sar (and thus EVD) by usual hybridization and amplification tests, also for recombinant production of (I). This sequence represents a Staphylococcus aureus sarA protein which is described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  epidermidis; open reading frame; ORF; bacterial infection;

ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

NB. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  75

                                                      The present sequence is given in a specification relating to a method for identifying inhibitors of SarA (staphylococcal accessory regulator) function involved in the expression of Staphylococcal virulence genes. The method comprises contacting a candidate inhibitor with a SarA binding site of the agr (accessory gene regulator) locus in solution and assessing the binding of the candidate inhibitor to the SarA binding site of the agr locus. The identified inhibitors are useful for preventing and treating staphylococcal infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis lifection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   open reading frame; ORF; bacterial infection;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              epidermidis, open reading frame, ORF, bacterial infection, gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucled: acid sequences which encode the amino acid sequences yiven in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treament of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life Cycle or inhibit S. epidermidis infection.

N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                 98

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleid caid sequences which encode the amino acid sequences given in ABB35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can for compounds able to interfere with the S. epidermidis life screen for compounds able to interfere with the S. epidermidis life N. B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     72
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is that of a mutant RAT (regulatory of autolytic activity) protein of Staphylococcus aureus. It is encoded by a mutant RAT gene (see ABV7308) identified in a Th551 transposon library of S. aureus strain RN6300. Transposon insertion results in a truncated RAT coding sequence, yielding a protein missing the last C-terminal 13 amino acids of the wild-type protein sequence (see ABP5429). A RAT mutant strain displayed significantly enhanced autolytic activity as compared with the parent. In the presence of penicillin, the RAT mutant showed increased lysis as compared with wild-type S. aureus. The invention provides RAT gene and RAT mutant mucleic acid sequences, the polypeptides encoded by these genes, vectors and sequences, the polypeptides encoded by these genes, or the polypeptides encoded by the autolytic activity of S. aureus and other bacteria through interaction with the RAT gene, RAT mutant gene, or the polypeptides condition of growth of S. aureus and other bacteria and in the tranship of growth of S. aureus and other bacteria and in the tranship with an antibiotic such as penicillin to promote lysis of the bacterial. The RAT gene and gene products are also useful as research tools to enhance the understanding of the autolytic research tools to enhance the understanding of the autolytic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New regulator of autolytic activity (RAT) nucleic acid sequences and polypeptides, useful for regulating the autolytic activity of bacteria, inhibiting bacterial growth and infectivity, or for treating bacterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     LYNAGRÖVNRYYSNKVFKKYNLTYPQFLVLT-ILWDES-PVNVKKVVTELALDTGTVSPL

The present sequence is a novel regulatory of autolytic activity (RAT) protein of Staphylococcus aureus, which is involved in the control, modulation or regulation of autolytic activity. This 17 kDa protein (predicted pI 7.38) is encoded by a novel gene (see ABUY3907) that was identified in a Th51 transposon library of S. cureus strain RN6390 by screening for genes that affected expression of genes encoding the capsular polysaccharide of S. aureus. The invention provides RAT gene and RAT mutant nucleic acid sequences, the polypeptides encoded by these genes, vectors and host cells, and a method of identifying agents that modulate the aucolytic activity of S. aureus and other bacteria through interaction with the RAT gene, RAT mutant gene, or the polypeptides encoded by them. These agents are expected to be useful in the inhibition of growth of S. aureus and other bacteria and in the treatment of bacterial infection. The RAT gene or gene products are also useful as research tools to enhance the understanding of the autolytic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     10 LVNATFQVKKFFRD-TKKKFNLNYEBIYILNHILRSESNEISSKEIAKCSEFKPYYLTKA 68

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention is related to a Lactococcus lactis nucleotide sequence (ABA9051) and related proteins (ABB53300-ABB55621). The nucleic acid sequence; suseful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese.

Note: The sequence data for this patent is based on equivalent patent WO200177334 (published 18-07-2001) which is available in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      26

The present invention relates to the genome sequence of Listeria monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein encoded by the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and to his synthesis and blodegradation, especially blosynthesis of Vitamin B12. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes. Talated diseases. In addition, the genome sequence and proteins encoded by it are addition, the genome compositions for the treatment or prevention of infections by L. monocytogenes and related organisms.

Note: The sequence dated for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO.

The province of the printed by the printed specification, but was obtained in electronic format directly from WIPO.

The province of the printed by the printed specification, but was obtained in electronic format directly from WIPO.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 5018, Application US/09134001C

Patent No. 6380370

GENERAL INFORMATION:
APPLICANT: LLYND OUGCETE-Stamm et al
TITLE OF INVENTION: WUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS
TITLE OF INVENTION: BPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: BPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/134,001C
CURRENT FILING DATE: 1998-08-13
PRIOR FILING DATE: 1997-11-08
PRIOR FILING DATE: 1997-11-08
PRIOR FILING DATE: 1997-08-14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 5581, Application US/09134001C

Patent No. 6380370

GENERAL INFORMATION:
APPLICANT: Lynn Doucette-Stamm et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS
TITLE OF INVENTION: EPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC-007
Marc J. Rubenfield et al.
FENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
FENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 6399, Application US/09107532A
Patent No. 6583275
GENBRAL INFORMATION:
APPLICANT: Lynn A Doucette-Stamm and David Bush
APPLICANT: Lynn A Doucette-Stamm and David Bush
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
FITLE OF INVENTION: ENTEROCOCCUS FAECIUM FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  239 LYSTSLÖMTKVYKPLLQALGLTYPQ-YIAMLVL-WERDGLTVGEISARMLTDPGSLTPLL 296

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TYPE: PRT
CRGANISM: Staphylococcus aureus
US-10-092-264-2 -!-SUBUNIT: Consists of at least two heavy chains and a number of intermediate and light chains.
-!-DOMAIN: Dynain heavy chains probably consist of an N-terminal stem (which binds cargo and interacts with other dynain components), and the head or motor domain. The motor contains six tandemly-linked AAA domains in the head, which form a ring. A stalk-like structure (formed by two of the coiled coil domains) protrudes between AAA 4 and AAA 5 and terminates in a microtubule-binding site. A seventh domain may also contribute to this ring; it is not clear whether the N-terminus or the C-terminus forms this extra domain. There are four well-conserved and two non-conserved ATPase sites, one per AAA domain. Probably only one of these (within AAA
                                                                                                                                                                                                                  TISSUE=Nasal polyps;
Maiti A.K., Mattei M.-G., Jorissen M., Volz A., Ziegler A.,
Bouvagnet P.,
Chromosomal localization of human dynein heavy chain genes.";
Submitted (JAN-1999) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Force generating protein of respiratory cilia. Produces
force towards the minus ends of microtubules. Dynein has ATPase
activity; the force-producing power stroke is thought to occur on
release of ADP.
                                                                                                                                                                   42 LRSESNEISSKEIA----KCSEFKPYY-----LTKALQKLKDLKLLSKKRSLQDERTV

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Science 273:1058-1073(1996).

-!- FUNCTION: Involved in DNA double-strand break repair (DSBR). The rad50/mrell complex possesses single-strand endonuclease activity and ATP-dependent double-strand-specific exonuclease activity. Rad50 provides an ATP-dependent control of mrell by unwinding and/or repositioning DNA ends into the mrell active site (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                3 KINDINDLVNATFQVKKFFRDTKKKFN-----LNYEBIYILNHILRSBSNBISSKBIAK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                The minimal gene complement of Mycoplasma genitalium.", Science 270:397-403(1995).
-!- FUNCTION: DNA POLYMERASE III IS A COMPLEX, MULTICHAIN ENZYME
RESPONSIBLE FOR THE REPLICATIVE SYNTHESIS IN BACTERIA.
THIS DNA POLYMERASE ALSO EXHIBITS 3' TO 5' EXONUCLEASE ACTIVITY.
-!- CATALYTIC ACTIVITY: N deoxynucleoside triphosphate = N diphosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SUBUNIT: DNA polymerase III contains a core (composed of alpha, epsilon and theta chains) that associates with a tau subunit. This core dimerizes to form the POLIII' complex. PolIII' associates with the gamma complex (composed of gamma, delta, delta', psi and chi chains) and with the beta chain to form the complete DNA polymerase III complex (By similarity).
                                                                                                                                        SEQUENCE FROM N.A.

-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- FURN. Oxidation on Cys-15 in response to redox signaling leads to the loss of DNA-binding activity and the inactivation of repressor function. Oxidized OhrR can be further reduced by thiol reductants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CYSTEINE SULFENIC ACID (-SOH) (PROBABLE). C->G,S: FULL REPRESSOR ACTIVITY, BUT NO MODULATION BY PEROXIDE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MEDLINE=21311737; PubMed=11418552; Fuangthong M., Atichartpongkul S., Mongkolsuk S., Helmann J.D.; Fuangthong M., Atichartpongkul S., Mongkolsuk S., Helmann J.D.; "OhrR is a repressor of OhrA, a key organic hydroperoxide resistance determinant in Bacillus subtilis."; J. Bacteriol. 183:4134-4141(2001).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ъ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE=22008016; PubMed=11983871; Fuangthong M., Helmann J.D.; Fuangthong M., Helmann J.D.; Fuangthong M., Helmann J.D.; Formation of a cysteine-sulfenic acid derivative."; From Acad. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                    US-10-043-539A-2
